2020-2021
Upper respiratory tract infection in Chi Yun School

24th November, 2020

Dear Parents/Guardians :

Regarding the URTI condition two weeks ago, since the infected students have recovered and no new cases were found, our school has restored to the normal prevention and control measures starting from 23 November 2020. We will, as always, keep following the Guidelines on Prevention of Communicable Diseases on preventive and control measures against seasonal influenza and other infectious diseases. Meanwhile, Parents/Guardians should continue to adopt strict personal and environmental hygiene practices for students to prevent respiratory diseases and other infectious diseases. Thank you for your cooperation and support.

Yours faithfully,

Chung Lai Kuen

Principal, Chi Yun School
